Fiche 1

EXERCICE 1

Calculer.

$3^4 =$ .....

$(-4)^3 =$ .....

$0{,}2^3 =$ .....

$4^3 \times 25^3 =$ .....

$1{,}25^4 \times 8^4 =$ .....

$8 \times 5^3 =$ .....

EXERCICE 2

Écrire sans exposant, sous forme fractionnaire.

$A = 5^{-2} = \dfrac{1}{\cdots\cdots} =$ .....

$B = 2^{-4} =$ .....

EXERCICE 3

Compléter.

$A = 2^7 \times 2^3 = 2^{\cdots\cdots}$ $\qquad$ $B = 8^{-7} \times 8^5 = 8^{\cdots\cdots}$

$C = \dfrac{7^9}{7^4} = 7^{\cdots\cdots}$ $\qquad$ $D = \dfrac{3^{-2}}{3^6} = 3^{\cdots\cdots}$

$E = (4^3)^5 = 4^{\cdots\cdots}$ $\qquad$ $F = (0{,}7^{-3})^2 = 0{,}7^{\cdots\cdots}$
